

Samson Olusegun

Software Engineer

Experience Summary: Software Engineer specializing in backend systems, infrastructure, and DevOps. Built production infrastructure on GCP serving real-world applications with 99.9% uptime. Proficient in Rust, TypeScript, and Kubernetes with proven ability to own full infrastructure lifecycle from design to production.

TECHNICAL EXPERIENCE

Mavapay Digital Solutions, US – Backend & Infrastructure Engineer (Remote) Dec 2024 – Present

- Own complete infrastructure on GCP ensuring 99.9% uptime for payment processing operations, enabling reliable transaction settlement for customers.
- Built automated CI/CD pipelines enabling faster feature delivery and zero-downtime deployments, reducing release risk and developer friction.
- Provisioned scalable GCP infrastructure using Terraform, enabling rapid environment setup and consistent deployments across staging and production.
- Built comprehensive monitoring and alerting system reducing MTTR by 30%, minimizing payment processing disruptions and customer impact.
- Reduced cloud infrastructure costs through resource optimization and query tuning while maintaining system performance and reliability.
- Designed secure payment processing APIs optimized for high transaction throughput, ensuring compliance and fast settlement times.
- Built Bitcoin-based settlement infrastructure enabling multi-currency transaction processing and reducing settlement friction.

Chaincode Labs, US – Open Source Developer (Remote) Mar 2023 – Dec 2024

- Owned infrastructure for Bitcoin Dev Project platform, improving platform performance by 40% and enabling faster technical discovery for Bitcoin developers.
- Built CI/CD automation reducing manual deployment overhead and enabling rapid iteration on educational content and features.
- Designed transcript review system for Bitcoin technical content, improving content quality and developer engagement on the platform.
- Integrated Lightning Network payment features (L402, sat rewards) enabling developers to earn micro-transactions for contributions.

Kernel Systems, Nigeria – Technical Lead (Remote, Part-Time) Oct 2022 – Present

- Led technical design and code reviews establishing engineering standards that improved code quality and reduced bugs in production.
- Delivered Bitcoin-powered payroll infrastructure enabling multi-currency salary payments and automated settlement for employees.
- Built automated deployment pipelines reducing release cycle time and enabling faster feature delivery to customers.
- Managed cloud infrastructure ensuring system reliability and availability for payroll operations.

Qala Dev, Nigeria – Bitcoin Protocol Developer Intern (Remote) Jan 2021 – Jul 2021

- Contributed to open-source Bitcoin development projects, gaining hands-on experience with Bitcoin Core and Lightning Network protocols.
- Built Bitcoin testnet experiments and supported hackathons, helping developers learn Lightning Network integration.

Adekunle Ajasin University, Nigeria – Web Developer

Jan 2021 – Jun 2021

- Developed student portal web applications automating student requests across departments and reducing manual processing.
- Conducted QA testing and bug resolution, improving portal reliability and reducing service downtime for students.

OTHER EXPERIENCE

Propel, Germany – Technical Jury (Remote)

Nov 2022 – Jan 2024

- Conducted 200+ technical interviews for software engineering candidates, improving acceptance quality by 15%.
- Standardized evaluation frameworks reducing review cycle time by 20% and improving hiring consistency.

Tech4Dev, Nigeria – Frontend Development Consultant (Contract)

Aug 2022 – Jun 2023

- Designed and delivered a modern frontend engineering curriculum for 200+ trainees.
- Created training resources and assessments that boosted trainee graduation rates.

EDUCATION

Adekunle Ajasin University

Bachelor of Science in Economics
December 2015 - April 2021

SKILLS

Languages	Rust / TypeScript / Python / JavaScript / Zig /
Cloud & Infrastructure	AWS / GCP / Kubernetes / Docker / Terraform / Ansible / Heroku / Railway / Helm / Pulumi
CI/CD & DevOps	GitHub Actions / TravisCI /
Databases	PostgreSQL / MongoDB / SQLite / Firestore
Backend Frameworks	Axum / Actix / Express / Node.js
Monitoring	Prometheus / Grafana / Openobserve / CloudWatch / PagerDuty
Security & Networking	IAM / VPNs / Load Balancing / SOC II Compliance

INTEREST

IT / Data / Bitcoin / Movies / Traveling

LANGUAGES

English / Yoruba / French (Beginner)

PROJECTS

HXCKR - Bitcoin Education Platform (Org Founder)

[Github](#)

Open-source platform for technical education enabling hands-on learning through automated code evaluation. Piloted with Bitcoin curriculum at Chaincode Labs. Built complete microservices platform using Kubernetes, Rust, and TypeScript with automated test runners, LMS backend, and CI/CD pipelines. Managed multi-environment deployments across 5+ repositories with infrastructure-as-code and container orchestration.

NodeGaze - Lightning Network Observability Platform

[Github](#)

Observability platform helping Lightning Network operators. Built event-based system using Rust (Axum), SQLite, and Next.js with real-time monitoring, webhook integration, Discord notifications, and RESTful APIs. Designed database schema and migration system with SQLx.

Remote Code Execution using Nix

[Github](#)

Lightweight remote code execution system using Nix for reproducible, isolated environments. Built with TypeScript and Bun runtime, providing a memory-efficient alternative to Docker for sandboxed code evaluation. Demonstrates practical application of Nix for secure code execution.

Docker TCP Connector

[Github](#)

Networking utility solving Docker's cross-network communication limitations. Built in Rust to enable TCP communication between containers across different networks, facilitating distributed system debugging and container log monitoring.
